

Senior Driving Program

Keeping Seniors Safe through Life Changes

What is the Senior Driving Program?

The Senior Driving program is an evaluation performed on any individual identified as a potential driving risk. A comprehensive, individualized rehab program may be developed for identified deficits.

What can I expect?

Several physical and cognitive evaluations will be performed including: active range of motion (ROM), muscle strength, vision, problem solving, impulse control, memory and reaction time.

How does it work?

The evaluation takes about 1½ hours. Our occupational therapist will then analyze the test results. Recommendations will then be provided to the patient and referring provider. The physician then has objective information in which to make a decision. Additional therapy may be ordered at that time to work on any identified deficits.

For Every Stage

Our Senior Driving Program was developed with our senior population in mind, but is appropriate for any individual identified as a potential driving risk.

Insurance Coverage?

A referral with the corresponding diagnosis will be required in order for the Driving Assessment to be covered by insurance. The Driving Assessment will be covered the same as any other occupational therapy order.
